

# Back to travel freedom

## Measures for safe travel:

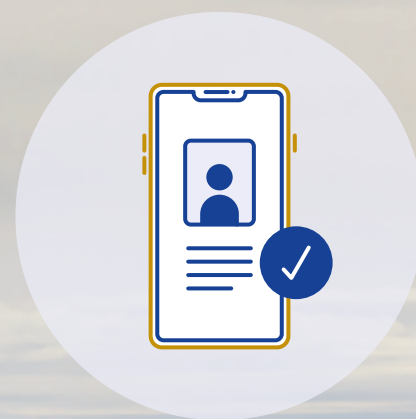

### Risk-based approach

No travel restrictions between countries with a similar risk of infection. Safety is to be achieved via a broad-based vaccination, test and trace strategy.

### Vaccinate and test

Anyone who can demonstrate that they have been vaccinated, have recovered from or tested negative for Covid-19 should be able to enter, leave and move around freely in Switzerland. An antigen test is sufficient to demonstrate that there is no Covid-19 infection.

### Digital proof

Proof of vaccination, recovery or a negative test must be standardised and can be provided in digital form.
